

Step 2: Configure Mobility Print

For most organizations, Mobility Print is very easy to configure and will work out of the box.

There are, however, a number of options that you can configure to customize the default Mobility Print settings to suit your needs:

1. [Select the printers to publish.](#)
2. Configure the printer discovery method for your clients:
 - [mDNS](#)
 - [DNS](#)
 - [a known host.](#)

TIP

Not sure which method to use? Take a look at [Printer discovery—which method is best for you?](#)

3. If PaperCut NG/MF is also installed, [configure the print authentication mode.](#)
